WHAT HAPPENS ON SOCIAL MEDIA . . . COULD DERAIL YOUR LEGAL CAREER: TEACHING E-PROFESSIONALISM IN EXPERIENTIAL LEARNING

Colleen T. Scarola*

ABSTRACT

Social media has fundamentally changed how people communicate and engage with one another in modern society. Because it so embedded in our culture, it is no surprise that corporate America and other industries, including the legal industry, utilize social media to engage with the public, advertise and market their services and products, and share information. An attorney who fails to utilize social media will not only be invisible and less credible, they will also forfeit their position as the “go-to” lawyer and miss out on rising sectors as sources of new business. Therefore, future lawyers need to develop social media skills to be successful in the legal profession. That said, with any technology, there are certain risks to using it improperly, which can potentially derail a law student’s (or legal professional’s) career. In order to better prepare students for law practice, law schools should be teaching basic and fundamental social media skills, including how to engage in a professional manner on these platforms and the legal and ethical risks of using this technology.

INTRODUCTION

Social media, for better or worse, is here to stay.1 It has fundamentally changed the legal profession “bringing with it a range of benefits and challenges.”2 As a result, law students and lawyers need to develop competency with this technology to be successful in the legal profession. Not only do they have to understand how to utilize social media effectively and professionally, but they should also appreciate the perils of improper use. In other words, students must become e-professionals and engage online while adhering to relevant professional codes of conduct.3

So, what is social media anyway? Social media has been defined as “forms of electronic communication (such as websites for social networking and microblogging) through which users create online communities to share

---

3. Id. at 155.
information, ideas, personal messages, and other content (such as videos).”⁴ In other words, it is all about conversations.⁵ The different types of social media include “[w]ebsites and applications dedicated to forums, microblogging, social networking, social bookmarking, social curation, and wikis.”⁶ While “[m]any people believe that social media is limited to the large social platforms . . . [like] Facebook, Twitter, [and] LinkedIn,” it is really much larger than that.⁷ It also includes video and photo-sharing sites such as YouTube, Snapchat, Flickr, and Instagram; blogs; and other social networking sites like Pinterest, Tumblr, Google+, and Reddit.⁸

What makes social media different from other forms of communication is its breadth and reach.⁹ Unlike traditional internet communication, such as email, which tends to be more personal between sender and recipient, the ability to access social media from all over the world allows users to contribute and interact with others on an unprecedented level.¹⁰ It has become such an integral part of modern society with nearly 73% of the public using more than one social media platform.¹¹

Given its popularity with the public, it is only natural that attorneys would use social media. According to the American Bar Association’s (ABA) 2017 Legal Technology Survey Report, 81% of attorneys “report maintaining a presence on social networks for professional purposes.”¹² “With nearly 300 million users, LinkedIn provides lawyers with simple, cost-effective means to network with other professionals and to develop new business.”¹³ Thus, as “more legal practitioners jump on the social media bandwagon,” logically,

7. GARCIA & HOFFMEISTER, supra note 5, at 2.
aspiring [lawyers]—law students—would also want to establish a social media presence. Yet, “[m]any law students are hesitant to become involved in social media, in part because many law schools discourage it.” By discouraging law students to take a responsible and active role in social media circles, law schools may be encouraging their students to forego “a valuable opportunity to network and interact with potential future employers and colleagues.”

Because social media skills are necessary for the practice of law, law schools should educate students on the legal and ethical risks of using this technology.

To accomplish the goal of educating students on social media, law schools should use experiential legal education courses, particularly externship seminars. Experiential pedagogy encourages learning by doing, self-reflection, and the development of professional identity. Similarly, social media allows students to develop their “brand” and specialized knowledge in a particular area of law, and network and interact with potential future employers and colleagues. But, like any technology, there are risks to using it. When used improperly, social media use can potentially derail a law student’s (or legal professional’s) career. Thus, engaging students in self-reflection on effective and professional social media use, as well as navigating the legal and ethical risks to using social media, will better prepare them for the realities of living and working in a technology-driven age.

Part I of this Article provides a brief history of the evolution of social media and examines the rise of its use in the legal profession. Part II focuses on the importance of understanding social media and the potential legal and ethical risks of improper use. Then, Parts III and IV provide an overview of law school reform and a snapshot into the status of if and how law schools are providing curricular education on social media and the law. Finally, the Conclusion advocates for the creation of seminars that specifically address

questions around social media within the externship context, where students are actively immersed in legal practice.22

I. THE EVOLUTION OF SOCIAL MEDIA

Today, “there are . . . social networks with user bases larger than the population of most countries.” 23 It “is one of the fastest growing communication vehicles in the world.”24 As social media is constantly evolving, it is important to look first at where it started and then how it evolved into a phenomenon that is an integral part of modern society.25

A. History of Social Media

In the 1970s, the first form of social media was called the “bulletin board system,” or BBS.26 BBSes acted as forums or blogs where “people could engage” in discussions or post pictures, much like today.27 However, these systems lacked popularity since a computer was not a common commodity at the time.28

Social media shifted underground in the 1980s.29 The majority of BBSes “were . . . connected to adult content, pirate software, hacking theories, anarchist movements and virus codes.”30 However, in the 1990s, social media started to take on the form it has today when personal computers became more available to the masses.31 Chat services like AOL and instant messenger started to gain popularity.32 Music sites, such as Napster, made online music free.33 From this stemmed social networking sites like Six Degrees, which allowed users to create “personal profiles, friends lists, and

33. Id.
school affiliations.” Following Six Degrees came MySpace and “[m]odern day [s]ocial [m]edia giant Facebook.” The intent of these early social networking sites was “to establish online networks among like-minded peers and friends.”

Over time, the number of users on social media has grown and its uses have expanded.37 Previously, “users joined . . . [social media] sites . . . to share information and . . . user-generated content with [a] smaller network[] of friends” and family.38 “Today, however, social media sites are becoming popular tools” for information sharing and marketing.39 For instance, “when Facebook added video-sharing capacity to Instagram[,] . . . five million videos were uploaded in the first twenty-four hours.”40 In fact, since Facebook opened up to the public in 2006, it “has grown to over a billion users.”41 Use of social media has become so prevalent that according to a recent Nielson survey, in 2018, “young adults (18–34)” spent “43% of their time . . . on digital platforms[]” with nearly “a third of their time spent” on smartphone apps or browsing the web.42

While “social media sites share certain key characteristics, the purposes and architecture of these sites are nearly limitless.”43 What makes social media different from other forms of communication then is its breadth and reach.44 Social media encompasses a wide reach of communication that is “as diverse as human thought.”45 In “contrast to the earl[ier] days of the Internet[,] . . . today’s websites are interactive” and allow users to connect

and communicate with each other and share user-generated content, such as documents and written postings, audio files, video, and music.46 “Most social media services encourage” interaction and engagement with other users, “promot[ing] a two-way conversation in which web sites, resources, and people connect, create, and develop content collectively.”47 Simply put, it is a “relatively unlimited, low-cost capacity for communication of all kinds.”48

Such interaction on social media can take a variety of forms.49 Hashtags, for instance, allow users “to search for specific topics and keywords” when a word or phrase is preceded by a hashtag sign (#) as well as “provide a way for organizations to interact with individuals.” 50 “Commercials, advertisements, or general notices will now typically include a hashtag allowing individuals to interact around a brand or event no matter which platform they use.”51 While hashtags grew from Twitter, now virtually all social platforms support them.52 “The simplest form of social media content engagement involves a single click or action.”53 Facebook allows users to react to a post by clicking the “like,” “love,” “haha,” “sad,” “angry,” and “wow” buttons.54 By double-clicking on a photo, Instagram users can give it a heart.55 Similarly, “Twitter users can click a heart button associated with a tweet.”56 Overall, these platforms allow users to engage seamlessly with content.

In contrast, users can interact with one another and content in a more complicated manner through responses and tagging.57 People can “respond to a particular piece of content,” and, depending on the social media platform, “[t]hat response can include text, photos, or other graphics but the entire response becomes part of the conversation attached to the content posted by

the original user.”58 By tagging someone, users can “intentionally include[] another user in the conversation or content.”59 For example, a user could post an article and tag another user to indicate the article is also relevant to that other user.60 “This may bring more attention to” that article “by explicitly including [the second user] and [her] connections in the conversation.”61

By understanding the functionality of social media, including the different ways to engage, law students and attorneys will better appreciate the legal and ethical risks of its use.62

B. Social Media in the Legal Profession

Historically, the legal profession cautiously approached technology establishing new channels of communication.63 “Despite resistance to change, the legal profession is adopting technology, including social media, at a ‘staggering rate’ as part of legal services delivery.”64 This comes as no surprise given that nearly 73% of the public uses more than one social media platform.65 “Lawyers must provide the online information that clients are seeking in order to establish meaningful connections with those clients.”66 As such, they are employing a variety of social media sites, including Facebook, Twitter, LinkedIn, and YouTube, to communicate with other lawyers, clients, and the public.67 According to the ABA’s 2017 Legal Technology Survey Report, 81% of attorneys reported “maintaining a presence on social networks for professional purposes.”68 The platforms most commonly used were LinkedIn (72% of lawyers reporting a presence), followed by Facebook (34% participation), and finally Twitter (19% of attorneys reported maintaining a presence).69 “Only 23% of respondents report[ed] that their firms do not maintain a presence on any social networks.”70

67. See infra notes 68–70 and accompanying text.
68. Shields, supra note 12.
69. Id.
70. Id. (emphasis in original).
The report further revealed an increase in the percentage of law firms that reported that they have a blog from 26% during 2013 to 2016 to 31% in 2017.71 Lawyers that personally maintain a legal topic blog increased “from 8% in 2016 to 12% in 2017.”72 Of the lawyers that use social media “for professional purposes, 69% do so for professional development [or] networking,” 56% for client development, and 39% for education and awareness. 73 Less frequently, lawyers also used social media for case investigation and other uses.74

There are clearly numerous benefits to attorneys actively engaging on social media. “The internet and social media serve as accelerators of relationships and a lawyer’s word-of-mouth reputation.”75 For instance, by maintaining an online journal or blog, lawyers may enhance their reputations and demonstrate expertise in their fields by disseminating information. In fact, lawyers “in firms of 2-9 or 50-99 lawyers each reported a greater than 50% success rate in client retention as a result of blogging.”76 Use of social media further allows attorneys to “develop and maintain professional competence” through “reading and writing about recent developments in a particular area of the law.”77 Social media has also arguably “levelled the playing field for lawyers.”78 Lawyers now have unprecedented access to marketing, communication, preparation and trial investigation, and legal services by using professional networking skills.79 Such “technological advancements in information gathering, storage, and dissemination have changed the practice of law, especially when compounded with the cultural changes within society toward an increased reliance on social networking.”80 Attorneys must therefore utilize social media and other new technology to compete in the market effectively and efficiently, “develop relationships[,] and improve professional competence.”81

79. Id.
81. Burns & Corbin, supra note 2, at 159–60 (footnote omitted) (quoting Ciolino, supra note 77, at 1).
In the coming years, if not already, lawyers who fail to embrace social media will be invisible and less credible. “They are . . . forfeiting their position as the ‘go to’ lawyer and missing out on emerging industries as sources of new business.”82 In addition, “[t]hese lawyers are also absent from the conversation taking place among thought leaders, reporters, and business leaders” who are engaging in social media.83 Thus, “writing-off the disruptive influence of social media will leave many, if not all social media holdout attorneys wondering where all of their business, and billable hours, went.”84

II. ETHICAL IMPLICATIONS OF SOCIAL MEDIA

While social media provides many benefits to the legal profession, its use is not without risks, particularly concerning compliance with legal ethics rules.85 Social media has affected “[t]he professional conduct of attorneys, prosecutors, [and] judges.”86 Improper social media use can result in lawyers breaching various ethical rules, including confidentiality, competency, communication, and unauthorized conduct of law.87 “The ABA has provided guidance in legal ethics and professional responsibility by promulgating professional standards that serve as a model of regulatory authority governing the legal profession.”88 Over time, the ABA has modified these regulations “to accommodate the expanding influence of technology on the practice of law.”89 Specifically, as will be discussed below, the rule of competency has been extended to include technological competency.90

Despite these changes in the rules and widespread social media use by lawyers, a 2015 “ABA report found . . . major gaps in both the existence of and education about policies on professional use of social media” “by lawyers and law firms”:

[M]any firms still have not adopted firm-wide policies on the use of these tools. Less than half of the respondents—45%—said their

85. See infra notes 86–87 and accompanying text.
87. See Jacobowitz & Singer, supra note 24, at 453–54 (describing the California State Bar’s 2010 advisory opinion on “an attorney’s obligation to be attentive to available security features” regarding client confidentiality and security when using technology).
88. Id. at 462 (footnote omitted).
89. Id. (emphasis omitted).
90. Burns & Corbin, supra note 2, at 156–57.
firms have policies on the use of online communities and social networks, and even fewer have policies covering blogging (32%) or Twitter use (25%). Perhaps even more disturbing, over 50% of respondents overall did not know whether their firms had these policies in place—and this number was even higher for lawyers in small firms. Of those in small firms (2 and 9 lawyers), 61% were unaware of the existence of any such policies. These numbers have also remained relatively consistent over the past several years. Firms need to institute these policies and do a better job of educating their attorneys about the need for and existence of these policies.91

There is a clear need to better educate legal professionals concerning ethical, responsible, and professional use of social media.92 To that end, a variety of Continuing Legal Education (CLE) courses offered across the fifty-states focus specifically on social media.93 Those courses include The Ethics of Social Media: What Attorneys Need to Know;94 Identifying and Avoiding Social Media Traps for Lawyers;95 Social Media and the Bar Rules;96 Ethical Issues in Social Media;97 Practical and Ethical Use of Social Media in Litigation;98 The Ethics of Social Media Research;99 and Facebook in the Workplace: The Intersection of Social Media and Employment Law.100 Such courses provide foundational knowledge and encourage attorneys to engage in e-professional and ethical use of social media. In addition, the E-

93. I conducted a search on Google using the following phrases: “social media CLE” and “social media continuing legal education.” My research found that each state offers a CLE on social media except for Kansas, Louisiana, and Idaho (pending).
Professionalism and Social Networking work group for the National Association for Law Placement, Inc. (NALP) “has [developed] six e-guides” that discuss “e-professionalism for law students and lawyer” with various different social networking sites and everyday electronic media sources.\textsuperscript{101} The e-guides include LinkedIn: Facebook for Lawyers,\textsuperscript{102} Effective Email Strategies for Law Students and Lawyers,\textsuperscript{103} and Managing Your Digital Dirt.\textsuperscript{104} These are positive steps in the legal profession. However, these steps do not negate all of the risks associated with using social media. Some of the ethical standards implicated by lawyers’ use of social media are discussed below.\textsuperscript{105}

A. Confidentiality Risks

A lawyer’s use of social media creates a risk that they will inadvertently disclose confidential client information, which Model Rule 1.6(a) prohibits.\textsuperscript{106} This duty to maintain strict confidentiality is not altered simply because we are dealing with a new medium.\textsuperscript{107} Using social media can result in the disclosure of confidential information in a variety of ways.\textsuperscript{108} Tweeting, blogging, and posting Facebook status messages “allow for instant publication of information, including information about procedural developments, interparty negotiations, courtroom developments, and business-related travel.”\textsuperscript{109} Some social media sites permit users “to import [their] contact information from existing e-mail accounts,” which could publicize details about vendors, witnesses, clients, and consultants.\textsuperscript{110} Even photo-sharing sites, like Instagram, can pose a confidentiality risk if such

\end{itemize}
photos inadvertently display trial materials, locations of personnel, or evidence.\footnote{111}

Every day, people blog, tweet, and post “their every thought with little self-censorship and with few repercussions.”\footnote{112} However, in the legal industry, improper social media use “can result in” the disclosure of “confidential information, a waiver of the attorney-client privilege, or disciplinary action” before the state bar.\footnote{113} Indeed, one lawyer blogged and tweeted about a case she believed to be wrongly decided in an effort to raise awareness and influence the judge, resulting in her disbarment.\footnote{114} Relatively, attorneys posting about sensitive and polarizing issues on their individual Facebook pages has resulted in employment termination.\footnote{115}

Given that posting on social media is easy and immediate, lawyers must proactively “safeguard information relating to the representation of a client against inadvertent or unauthorized disclosure,” including using and increasing privacy settings on such sites.\footnote{116}

\section*{B. Competency with Emerging Technologies}

Lawyers also have a duty to “provide competent representation to a client” under Model Rule 1.1.\footnote{117} At the most basic level, this duty requires a lawyer to be knowledgeable concerning the substantive law she practices in. Beyond that, one of the comments to the rule states “[t]hat to maintain the requisite knowledge and skill, a lawyer should keep abreast of changes in the law and its practice including the benefits and risks associated with relevant technology.”\footnote{118} Logically, this extends to social media. In fact, “38 [s]tates

duties of technological competence. The ethical opinions in those various states focus on the proper manner in which lawyers should use social media in a case, rather than whether it should be used.

At the very least, lawyers should be aware of social media as a potential source of information and competently be able to obtain such information in (or in anticipation of) litigation. Social media users generally publish vast amounts of information online, making it a valuable source of information. Users have claimed such posts are subject to a reasonable expectation of privacy or are otherwise privileged, but courts have seemingly rejected that notion. Courts have further found that a privilege does not exist even if the social media user restricts access to posted material to a limited group of friends or followers. However, ethical considerations remain, particularly when a lawyer attempts to obtain restricted information posted on a social media site by methods other than those available under the formal discovery process. In addition, this duty also necessitates that lawyers understand the functionality of social media and social networking sites and are able to advise clients about issues that may arise from their use, including what the

FOUND. § 5.05 (2012) (explaining the conclusion of the New York City Bar Association’s Committee on Professional and Judicial Ethics that neither a lawyer nor the lawyer’s agent may use deception to obtain information from a person’s social networking website); see Nancy L. Cohen, Ethical Duties During Litigation, 32 Col. Law. 53, 54 (2003) (illustrating a scenario in which lawyers can be subject to discipline using the Colorado Rules of Professional Conduct).
client must do to preserve information that may be relevant to legal disputes.125

C. Communication

It is well-established tenant that “[l]awyers have a fundamental duty to communicate with their clients.” 126 “In 2012, the ABA Ethics 20/20 Commission amended Comment 4 to Model Rule 1.4, changing it from ‘[c]lient telephone calls should be promptly returned or acknowledged,’ to ‘[l]awyers should promptly respond to or acknowledge client communications.” 127 As methods of client communications expand (email, texting, social media, etc.), “lawyers need to understand the communication possibilities and define the technology through which they will communicate with a client.” 128 One way to accomplish this is to set forth the mediums the attorney will use to communicate with the client in the engagement letter. At the outset of the relationship, it is important for the attorney to define the parameters of communication.129

Relatedly, due to “the various ways lawyers use social media to communicate with prospective clients, it is important for lawyers to understand the ethical risks that may arise when giving legal advice or opinions on social media, especially when it may create an unintended attorney-client relationship.”130 For instance, “a Q&A session on Twitter or a social media blog post welcoming inquiries on legal matters . . . may create a prospective client-lawyer relationship under Rule 1.18 of the ABA Model Rules of Professional Responsibility.”131 “[N]o clear line exists to determine what is legal information and what is legal advice.”132 A few jurisdictions including “Arizona, New Mexico, the District of Columbia, and Florida have” looked at “the issue of lawyers providing advice online” and

specifically cautioned them “to draw the line between giving specific legal advice and general information” to social media users. Ultimately, lawyers need to understand the importance of including a disclaimer that limits their obligations and exercise caution when contacted by other social media users.

D. Unauthorized Practice of Law

Model Rule 5.5 prohibits lawyers from engaging in the unauthorized practice of law in a jurisdiction in which the lawyer is not licensed. Nonetheless, “the actions [lawyers] take in social networking situations sometimes rise to the level of practicing law.” Social networking allows attorneys to advise clients throughout the country and beyond. As noted above, “by answering a question” in response to a social media post, an attorney may inadvertently advise a potential client. Adding an extra layer of complication, the attorney may be inadvertently engaged with a social media user in another jurisdiction. “Not only could you have a new client (and not realize it), but you also could be practicing law in a jurisdiction where [you are] not licensed.” Therefore, while using social media is important and necessary for a lawyer’s professional practice, doing so in a jurisdiction without an appropriate law license can result in an ethics violation.

III. STATUS OF CURRICULAR EDUCATION ON SOCIAL MEDIA AND THE LAW

Technology proficiency is not only a recognized competency for lawyers, but lawyers with such skills will be in great demand after graduation. E-professionalism, which often refers to the “professional conduct on electronic media,” is now a part of legal professionalism.

133. Jacobowitz & Singer, supra note 24, at 478.
134. See id. at 477–78 (explaining that the quick nature of the internet, specifically social media, could lead to unintentional duties to a prospective client, such that a lawyer should provide a disclaimer restricting their obligations in order to avoid an accidental consultation for legal services).

course.” Once I had a list of law schools that offered such courses, I visited the individual law school
websites to learn more about the social media courses being offered.
media law and 12 specifically have social media-focused classes. The law schools offering dedicated social media courses focus on a variety of topics, such as: (1) challenges of social media in the workplace, (2) legal issues associated with social media, (3) regulation of new technologies, and (4) defamation, privacy, and First Amendment principles as they relate to social media. SMU Dedman School of Law, for example, offers Social Media Law, providing “a comprehensive look at how social media is affecting the legal system.” At Columbia Law School, students can take Law and Regulation of Social Media, a seminar focused on the legal issues generated by social media use. The Law in a New Media World seminar at Georgetown Law examines “defamation, privacy,” and First Amendment principles that have evolved to address electronic media, including social media.

In addition to coursework, law faculty that actively use social media and require their students to blog provide guidance and opportunity for students to engage in social media in a professional capacity. Professor Jennifer Murphy Romig at Emory Law School not only requires her students to blog in her Advanced Legal Writing: Blogging and Social Media class, but also maintains her own blog, Listen Like a Lawyer. Professor Romig explores effective listening practices for lawyers, law students, and other legal professionals.

professionals.  Likewise, in *Entertainment Law and New Technologies*, Professor Tonya M. Evans at the University of New Hampshire School of Law expects her students to “maintain a Twitter account specifically for [the] class to microblog about” relevant issues. Professor Thaddeus Hoffmeister of University of Dayton School of Law teaches courses focused on technology, including social media; edits two blogs, *Juries* and *Social Media Law*; and authored the book *Social Media in a Nutshell*. These pioneers are providing a framework for developing social media skills and competencies. By doing so, law schools can better train students on the “intricacies of technology in the practice of law,” allowing them to succeed in the practice as well as increasing their “marketability to potential employers.”

IV. LAW SCHOOL REFORM AND INTEGRATION OF SOCIAL MEDIA EDUCATION WITHIN EXPERIENTIAL LEARNING

Experiential education is not new. Experiential learning can be traced back as far as “384 B.C.E. when Aristotle wrote, ‘[f]or the things we have to learn before we can do them, we learn by doing them.” However, integrating experiential learning into a traditional law school education is a more recent development. What follows is a brief history of law school reform concerning experiential learning and a discussion of how integrating social media within experiential learning is necessary to better prepare law school graduates for the practice.

In 2007, the Carnegie Foundation for the Advancement of Teaching released its report entitled Educating Lawyers: Preparation for the Profession of Law. Building on the themes addressed initially in the MacCrate Report, the Carnegie Report identified “two weaknesses of traditional legal education”: professionalism and inadequate attention to teaching legal skills. Specifically, the report emphasized “[o]ne limitation is . . . [that] legal education typically pays relatively little attention to direct training in professional practice . . . . The second limitation is law schools’ failure to complement the focus on skill in legal analysis with effective support for developing the ethical and social dimensions of the profession.” The report further stated becoming a lawyer requires law schools to “bridge the gap between analytical knowledge and practical application.” To do so, the Carnegie Report maintains “that apprenticeship}

is really the “heart of all education,” and it “endorses increased experiential and clinical legal education.”

Thereafter, the Clinical Legal Education Association (CLEA) in 2013:

petitioned the ABA to “adopt an accreditation standard that requires every J.D. student to complete the equivalent of at least 15 semester credit hours after the first year of law school in practice-based, experiential courses, such as law clinics, field placements, or skills simulation courses, with at least one course in a law clinic or externship.”

Responding to these calls for reform, law schools began to transform and implement experiential education into their curriculum.

The ABA, however, rejected CLEA’s proposal, instead requiring law schools “to ensure its graduates . . . complete at least ‘one or more experiential course(s) totaling at least six credit hours.’” Thus, to satisfy ABA’s accreditation standards, law schools must offer experiential courses. That said, the ABA does not actually define “experiential.” ABA Standard 303 provides guidance in stating “[a]n experiential course must be a simulation course, a law clinic, or a field placement.”

The primary focus” of these courses must:

1. integrate doctrine, theory, skills, and legal ethics, and engage students in performance of one or more of the professional skills identified in Standard 302;

2. develop the concepts underlying the professional skills being taught;

---

202. Id. at 17.
203. Id. (alteration in original) (quoting of AM. BAR ASS’N, ABA STANDARDS AND RULES OF PROCEDURE FOR APPROVAL OF LAW SCHOOLS 2015–2016).
3. provide multiple opportunities for performance; and

4. provide opportunities for self-evaluation.204

Students engage “in supervised real world practice” allowing them to experience how legal theory “learned in the classroom translates into being an effective lawyer . . . [r]egardless of whether the experiential learning occurs in a simulation course, a clinic, or an externship.”205 Students learn the skills through “repetition, faculty guidance, and the opportunity to practice the skills in a variety of complex situations.”206 From this standpoint, social media aligns well with experiential education; students learn by doing.

As an increasing number of “legal practitioners jump on the social media bandwagon, it should naturally follow that . . . aspiring [lawyers]—law students—would also want to establish a social media presence.”207 While most law students enter “law school with a heightened awareness of—and ability to interact with—tech based social media platforms,”208 that does “not necessarily . . . translate into the types of technological interactions future attorneys will encounter within their practices of law.”209 Students need to develop an understanding of technology like social media and harness it to be competent in the legal profession.210 Social networking sites, like LinkedIn and Twitter, allow students to connect and build relationships with legal professionals across the country and world, which in turn can lead to professional opportunities and development of one’s professional identity. That said, “[m]any law students are hesitant to become involved in social media, in part because many law schools discourage it.”211 Thus, “[b]y discouraging law students to take a responsible and active role in social media circles, law schools may be encouraging their students to forego ‘a valuable opportunity to network and interact with potential future employers and colleagues.”212

While some law school career development offices offer programming on and resources about using social media,213 law faculty are better suited to

educate and train students on this topic. Law faculty should teach basic and fundamental social media skills, including how to engage in a professional manner on these platforms, and should educate students on the legal and ethical risks of using this technology. Thus, offering social media courses within experiential legal education can accomplish these goals.

B. Evolution of Externship Seminars

In 1969, “[t]he term ‘externship’ emerged . . . when surveys of law school clinical programs referred to ‘farm-out’ clinics as externships.” Over time, “the term ‘externship’ [became] synonymous with ‘field placement.’” In an externship, students work off-campus (in the field) in a legal office, at a government agency, in-house, at a non-profit organization, or in a courthouse. As of 2012, 190 of the 200 ABA approved law schools offer externships that allow students to earn academic credit towards their J.D. degree. “Law school externship programs embody the belief that structured, examined involvement in practice is an essential part of the training of skilled, ethical lawyers.” To ensure these programs bridge the gap “between the practice of law and the classroom,” the ABA has promulgated certain standards governing externships.

The 1973 ABA Standard 306, as amended in 1977, did not refer to or indicate that a seminar must complement the externship. In fact, external placements (externships) “were increasingly disengaged from the overall curriculum.” In response, the ABA found a “lack of substantial supervision given by a law school faculty to law students working with practicing lawyers throughout a state.” In 2014-2015, Standard 306(c) provided:

https://www.colorado.edu/law/social-media (last visited Dec. 26, 2019) (encouraging law alumni and students to network with one another using social media).
214 See Ellis, supra note 14, at 325 (finding that “the problem starts in the career services offices, where student advisors are they themselves not active social media users”).
216 Id.
217 See id. at 3–4 (identifying externship types).
218 Id. at 5.
220 Id. at 129 n. 7.
A law school may award credit for distance education and may count that credit toward the 45,000 minutes of instruction required by Standard 304(b) if:

(1) there is ample interaction with the instructor and other students both inside and outside the formal structure of the course throughout its duration; and

(2) there is ample monitoring of student effort and accomplishment as the course progresses.224

By 1980, the ABA focused increasingly on examining externship programs for compliance with curricular requirements.225 The ABA tightened externship requirements, “requir[ing] that all field placement programs include seven programmatic elements.”226 The first is a “clear statement of its goals and methods, and a demonstrated relationship between those goals and methods and the program in operation.”227 It also adopted “Interpretation 2 of Standard 306,” which discussed “specific criteria for externship[s]” to require a classroom component along with the placement.228 Between 1993 and 2004, the ABA amended its standards, stating, “[a] contemporaneous classroom or tutorial component taught by a faculty member is preferred. If the field placement program awards academic credit of more than six credits per semester, the classroom or tutorial component taught by a faculty member is required.”229

The ABA Standards governing a classroom component regarding externships has shifted slightly from 2004.230 Presently, experiential course guidelines are under Standard 304.231 Under that standard, experiential learning is described as something that must be experiential in nature and

225. Ford, supra note 222, at 117.
226. Id. at 118.
227. Id. (footnote omitted).
229. Id at 705; see also AM. BAR ASS’N 1977, https://www.americanbar.org/content/dam/aba/publications/misc/legal_education/Standards/standardsarchive/1977_standards.pdf. (citation omitted)
230. See infra notes 231–33 and accompanying text.
lists five requirements for such courses, including a required classroom component. Specifically, Standard 304(a)(5) provides:

Experiential courses satisfying Standard 303(a) are simulation courses, law clinics, and field placements that must be primarily experiential in nature and must: . . . provide a classroom instructional component; or, for a field placement, a classroom instructional component, regularly scheduled tutorials, or other means of ongoing, contemporaneous, faculty-guided reflection.

Thus, while it is not required that “externship programs require a class along with [their] fieldwork,” the “vast majority” do. In fact, a 2007-2009 study, which examined 665 externship courses, found that 490 of those had a classroom component. Clearly, law schools believe a classroom component is important. There is dissent, however, concerning the design and structure of these classes.

According to the 2007-2009 survey, the classroom format for externship courses were devoted to the following topics: 56% to substantive and procedural law, 55% to legal process, 81% to professional roles and responsibility, 77% to reflection on placements, 69% to lawyering skills, 46% to legal institutions, 49% to career choices, and 11% to other activities. The survey also examined the different teaching techniques employed in these courses, finding that 94% use lecture and discussion, 67% use student presentations, 55% use guest speakers, 37% use student facilitation, and 17% use other methods.

Simply put, externship faculty have developed different approaches to the classroom component. At some law schools, externship seminars are general, with a focus on reflective learning. Some examples include American University Washington College of Law, Boston College Law

School, and Michigan State University College of Law. In contrast, some externship programs at Boston University School of Law, Howard University School of Law, and Seattle University School of Law tailored to a specific type of externship placement (i.e. criminal, civil, in-house, judicial, government, etc.). Still, other law schools like the University of Denver Sturm College of Law and Georgetown Law, offer externship seminars focused on different competencies and specific placement settings (i.e. social media skills, corporate, professionalism, work-life balance, prosecution, child advocacy, etc.).

Despite these conflicting approaches, there is consensus that “externship courses should begin with clear learning goals; those goals should drive the student’s work at the placement and the structure of the classroom component; and there should be meaningful formative and summative assessment.” Since “externship seminar[s] are fertile ground providing opportunities for reflection that the field experience alone does not,” faculty need to intentionally and “thoughtfully create academic components that amplify the lessons of fieldwork.” Externship faculty must design seminars that focus on development of practical lawyering skills and professional identity through field learning and reflection supported and guided by the faculty. These seminars should be “as educationally rich as possible,” and they should provide students with a crucial opportunity to examine “progress toward his or her professional identity as a future lawyer.”

It is clear that “[b]ecoming an effective, ethical, and fulfilled lawyer . . . is a [developmental process] that does not happen overnight.”254 It takes time. It is also “personal to each student.”255 Through externship seminars, faculty can dive deep into philosophical questions, like: What does it mean to be a lawyer? The seminars also encourage students to reflect on and answer other questions, such as: “What do I really believe in?”256 “Who am I as a member of this profession? . . . What am I like? . . . What do I want to be like in my professional role?”257 This exploration of “professional identity matters because it” allows students to “develop an internal compass for navigating” the “roles and responsibilities” lawyers have imposed by the Model Rules of Professional Conduct.258 At the end of the day, “[s]tudents want to know what is expected of them as [legal] professionals.”259 Therefore, an externship seminar that incorporates social media skills and use fits nicely with the goals of experiential education teaching students to “think[] like a professional.”260

C. Incorporating Professional Social Media Use into Externship Seminars

The gap between law school and the practice of law are bridged by externships.261 Such “programs embody the belief that structured, examined involvement in practice is an essential part of the training of skilled, ethical lawyers.”262 Simply put, experiential learning places “students into practice situations that can be used to teach . . . crucial aspects of lawyering in context.” 263 Through externship companion seminars, students develop lawyering skills and “cultivate [their] professional . . . identit[ies].”264 To that end, externship seminars should encourage students to develop responsible and professional social media skills. Such seminars allow for a deep dive into social media law in practice. This encompasses exploring how legal professionals are using social media for marketing and client development, branding, and networking. Most importantly, seminars should educate

264. See generally id. (providing comprehensive information on two different externship courses aimed at growing one’s own professional identity).
students on the ethical pitfalls of using social media. There is a broad range of ethics-related issues concerning social media use, including: civility, breaching client confidentiality, using social media to inappropriately gather evidence in litigation, or using social media to gather information about jurors.\footnote{265}

Externship seminars encourage law students to adopt a reflective, thoughtful, and deliberative approach to social media use.\footnote{266} Students learn to think like professionals and to form their own professional identities considering questions, such as: How do I develop a professional identity on social media? What does it mean to be a professional in a technological age? What are the professional and ethical standards that govern my behavior as a future lawyer engaged in social media? The nature of social media use poses risks that warrant these questions.\footnote{267} Professional risks involved in social media use are important to law students.\footnote{268} Thus, externship seminars better prepare law students for the realities of living and working in a technology-driven age.

\textit{D. Social Media Seminar}

Rather than steering law students away from social media, legal educators must teach law students how to use social media professionally and responsibly. Universities can accomplish this by offering a social media-focused externship course or by incorporating social media into an existing externship seminar. I do both at the University of Denver Sturm College of Law. I have found that integrating social media into my externship seminars is useful and valuable to my students.\footnote{269} I primarily teach externship seminars for students in private sector placements. However, I have taught the social media seminar to students across sectors (i.e. judicial, public, and private placements). The material is applicable and relevant to all students despite the nature of their placement.

In the summer of 2017, I designed a one-credit externship seminar called \textit{Social Media and the Law Practice}. Students enrolled in this seminar receive a letter grade at the end of the semester. By the end of the course, I hope students master five learning outcomes: (1) a developed understanding of the

\footnote{265} See supra Part II.

\footnote{267} See supra notes 114–15, 290–97 (detailing specific instances of negative repercussions after law students and lawyers irresponsibly used social media).
\footnote{269} Course evaluations are on file at the Sturm College of Law of University of Denver. Course syllabi and assignment descriptions are on file with the author.
evolution of social media and why such use matters in the legal profession; (2) an increased awareness of ethical implications involving the use of social media by law students and lawyers; (3) establish what constitutes professional social media use by law students; (4) gain tools to become “e-professional” students and future lawyers; and (5) newfound confidence in using social media.

The course is organized by topics including: (1) the evolution of social media; (2) the benefits of using social media as both a law student and a future lawyer (including using social media to network and create your own brand); (3) using social media effectively and ethically in investigation and discovery; and (4) ethical and professional implications of social media use. Throughout the semester, students are encouraged to use social media as a professional tool, as well as reflect on best practices for such usage. To achieve the course objectives, students engage in a variety of in-class activities and reflective assignments. For instance, at the beginning of the semester, students identify learning objectives for their externship experience, which consider specific areas they would like to improve in, their supervisor’s expectations, the specific placement, and the action plan they will implement. Students must meet with their supervisor concerning their learning goals for the semester. The supervisor must electronically confirm their goals in our experiential management software after the meeting.

At the outset of the semester, students also complete a Skills Self-Evaluation. Students rate their development in a variety of skills. The Evaluation allows students to identify their strengths, weaknesses, and areas of improvement for skills that practicing attorneys have identified as important. This also helps students determine which specific classes or externship course work they would like to take in their remaining time at law school.

In addition to these assignments, students also engage in a variety of other exercises. For example, students audit each social media site they use to ensure such usage complies with professional and ethical standards. I provide parameters to assist the students in evaluating their social media use. These parameters include: (1) put together a list of every social media site you currently engage in; (2) review your profile picture for each social media site (choose this photo wisely to ensure you would not be embarrassed to have a prospective employer view it); (3) set your security settings to the most restrictive level possible; (4) examine your Friends and Contacts lists (I recommend limiting certain social media sites such as Facebook and Instagram to close, personal friends, and using LinkedIn for professional contacts); (5) consider your online presence and check for consistency and quality across all of the social media sites you use (What do your posts, status updates, tweets, and responses to friends’ and contacts’ posts say about
you?); (6) evaluate whether you are using social media in such a way as to advance your professional and personal goals (Are there other social media sites you should be using? How can you engage with your current social media platforms better?); and (7) create new accounts on social media platforms that will assist you in advancing your goals.

Relatedly, students also examine the social media platforms attorneys use at their externship placements. As part of this assignment, students speak with their supervising attorney (or any other lawyer at their placement) about the attorney’s social media use. Specifically, students meet with a lawyer to discuss how: (1) the attorney is using social media, (2) how the placement engages in social media, and (3) the ethical and professional standards the attorney looks to guide such use. The students present their findings to the class. This exercise enlightens many students who fail to consider how social media has melded their professional and personal lives into one. Additionally, supervisor attorneys also raise other points the students had not considered.

In another exercise, the class develops a list of best practices when engaging with social media. Some of the best practices students have routinely included are: (1) be intentional in posting content on social media; (2) know your audience; (3) follow conversations and legal professionals that interest you; (4) increase privacy settings; (5) consider the individuals and organizations you follow and friend, as well as those you allow to follow and friend you; (6) build your reputation now; (7) treat any individual that engages with you on social media with civility and respect; (8) educate yourself on social media implications; (9) continue to build on your social media connections offline; and (10) be consistent in your branding and voice. Such reflective exercises allow students to see how social media applies to professionalism and the practice of law. Each student reviews existing social media policies at their placement as part of developing the best practices. This engagement helps students to connect externship coursework and real-world applications. For example, the importance of educating future attorneys on social media use through externship seminars directly connects to active policies implemented to protect attorneys from improper social media use. Given the evolving nature of social media, professors should constantly improve and revisit courses and lesson plans. The following teaching plan for two classes aids in developing similar social media seminars.

E. Teaching Plan for Using Social Media in Investigation and Discovery

In the semester-long social media seminar, one class is dedicated to exploring how attorneys can use social media effectively and ethically for
investigation and discovery. The discussion opens with the premise that lawyers can use social media for investigative purposes, but the parameters need to be defined. Prior to class, each student meets with their supervising attorney to discuss how their attorney and placement uses social media for investigative purposes. If students are at a judicial placement, the conversation instead focuses on any issues the judge has encountered when attorneys use social media for investigative purposes in a case. Students come to class prepared to discuss their meeting and Colorado Formal Ethics Opinion 127, Use of Social Media for Investigative Purposes.\textsuperscript{270} The “opinion addresses ethical issues that arise when lawyers . . . use social media [(including restricted portions of it)] to obtain information [concerning] witnesses, jurors, opposing parties, opposing counsel, and judges.”\textsuperscript{271} Considering that opinion, students engage in class discussion concerning the following:

- Can lawyers use social media for investigative purposes? What are the parameters?
- Should lawyers be proactively using social media for investigative parameters?
- How are attorneys at your placement using social media for investigative purposes?
- What Rules of Professional Conduct govern an attorney’s investigation of social media?
- What, if any, issues have your placements encountered because attorneys used social media in investigations?
- Do users have an expectation of privacy for social media activity? Should there be an expectation of privacy?

This tends to be a lively discussion, especially with regard to the issue of privacy. Students overwhelmingly tend to disagree with case law on this topic,\textsuperscript{272} arguing that there is an expectation of privacy when social media users take certain steps. The steps students generally identify include: (1) increasing privacy settings, (2) only posting content on their personal pages, and (3) managing content that the students are “tagged” in by other users.

Following that discussion, we turn to the discoverability of social media in civil litigation matters. First, students examine how a party seeks social media information through the discovery process. We review examples of

\textsuperscript{271} Id.
\textsuperscript{272} Page, supra note 122; see supra notes 122–23 and accompanying text (listing cases discussing privacy and social media).
potential social media discovery requests. Some examples I have used in the past include:

- Please provide any pictures of Plaintiff taken during the relevant time period and posted on Plaintiff’s profile.
- Please provide all social networking communications between Plaintiff and any current or former employees of Defendant that pertain to her employment at Defendant or this lawsuit.
- Identify and describe any social media services Plaintiff has used since 2016 including the URL (web address) for each specific service, as well as Plaintiff’s username/ID on the service. This includes, but is not limited to, Facebook, Twitter, LinkedIn, Instagram, Pinterest, Snapchat, or similar social media services.
- Please produce any and all profiles, postings or messages . . . from social media sites from September 2016 through the present, that reveal, refer, or relate to any emotion, feeling, or mental state of Plaintiff.
- Please list all steps which have been taken to identify and preserve any electronically-stored information (such as documents stored on any type of computer, text and instant messages, magnetic storage, solid state device, remote and cloud storage—including all social media and other information stored on the internet or accessible from websites, etc.) in connection with the incident or the injuries resulting from the incident.
- Please produce any and all archived posts, information, tweets, photographs, and/or any other material authored or posted by Plaintiff on any social media or websites used or frequented by Plaintiff, from the five years preceding the subject incident to the present.

Each student acts as the plaintiff’s attorney and states how he or she would respond to each of the requests. I challenge them to consider any objections while also stating the reasoning. Some common objections students point to involve relevancy, over breadth and burden, and privacy.

This exercise then leads into a discussion concerning the four approaches courts take in resolving discovery disputes related to social media information. Those approaches are:
Factual Predicate Approach: A party seeking discovery must demonstrate a “factual predicate” to access any private social media information;\(^{273}\)

“[W]ide-[O]pen or [B]lanket [A]pproach”: Parties are required to exchange social media passwords during the discovery phase;\(^{274}\)

“[R]easonable [P]articularity [A]pproach”: Parties must demonstrate that social media discovery request is relevant;\(^{273}\) and

“[D]irect [J]udicial [A]pproach”: Adopting “a hands-on role,” the judge directly “reviews the social media content” and determines whether disclosure to the opposing party is necessary.\(^{276}\)

We review and discuss cases that apply these approaches. We then revisit the discovery request examples. I designate two students each to act as counsel for Plaintiff and Defendant. The selected students then advocate for which approach they think the court should apply to each discovery request. The remaining students act as judges, determining whether such requests are permissible.

In this class, we also explore whether the Rules of Professional Conduct require attorneys to counsel their clients about their social media use and whether attorneys can advise clients to “clean up” their social media pages. For guidance, we look to the jurisdictions that have addressed ethical issues regarding counseling clients on social media use: New York,\(^{277}\) Pennsylvania,\(^{278}\) North Carolina,\(^{279}\) and Florida for guidance.\(^{280}\) Finally, the

\(^{273}\) See Romano v. Steelcase, Inc., 907 N.Y.S.2d 650, 654 (N.Y. App. Div. 2010) (determining that photos on the public portion of the plaintiff’s Facebook and Myspace accounts served as the factual predicate to obtain full access to the plaintiff’s social media information).

\(^{277}\) “New York attorneys may advise clients as to (1) what they should/should not post on social media, (2) what existing postings they may or may not remove, and (3) the particular implications of social media posts, subject to the same rules, concerns, and principles that apply to giving a client legal advice in other areas.” N.Y. Cty. Lawyers Ass’n, Ethics Op. 745, at 1 (2013).

\(^{278}\) Penn. Bar Ass’n, Formal Op. 2014-300, at 1–2 (2014) (“This [c]ommentary . . . provides a broad overview of the ethical concerns raised by social media . . . [The Committee] concludes[d] that . . . [a]ttorneys may advise clients about the content of their social networking websites, including the removal or addition of information.”).

\(^{279}\) “[A] lawyer must advise a civil litigation client about the legal ramifications of the client’s postings on social media as necessary to represent the client competently. The lawyer may advise the client to remove postings on social media if the removal is done in compliance with the rules and law on preservation and spoliation of evidence.” N.C. State Bar, Formal Op. 2014-5 (2014) (emphasis omitted).

\(^{280}\) “A personal injury lawyer may advise a client pre-litigation to change privacy settings on the client’s social media pages so that they are not publicly accessible. Provided that there is no violation of...
last part of class is dedicated to class discussion where we apply the Rules of Professional Conduct to various hypotheticals. I have routinely used the following:

- Public portions of private social media show inconsistencies with a represented party’s legal claims. As the lawyer for the opposing party, you suspect that the private portions of social media will contain similar, contradictory content that may be used for impeachment purposes. What do you do?

- You are an attorney at a small defense-oriented law firm and represent a retailer in a products liability lawsuit. You instruct one of the law clerks to become Facebook friends with the plaintiff. The clerk submits the friend request and the plaintiff accepts. During Plaintiff’s deposition, you ask the plaintiff questions about traveling, dancing, and other activities that relate to the seriousness of her injuries. Following the deposition, you also amend your discovery requests to include conversations, photos, and a video of the plaintiff dancing with her kids, all of which the law clerk obtained. Are there any ethical issues here? Assume you represent Plaintiff: How would you respond to the discovery requests? How would a judge rule on any dispute concerning the amended discovery requests?

- Plaintiff sues a cement truck company for the death of his wife after the truck crossed the centerline and tipped over on their car. Plaintiff’s attorney instructed his client to clean up his Facebook page after defense counsel sought screen shots and other information. Plaintiff deleted 16 photos, including one in which he held a beer can and wore a T-shirt that said “I (heart) hot moms.” Defense lawyers recovered the photos before trial and informed the jurors about the scrubbed photos at trial. As the judge, what would you do and why?

- An associate at a mid-sized law firm is active on social media, including Facebook, Twitter, LinkedIn, and blogging. The firm is defending a Fortune 500 company and one of its executives against sexual harassment claims by two women. After joining the case, the associate conducts some online research on the plaintiffs. She locates Plaintiff A’s Facebook page and sees a photo from a company holiday party. The party shows Plaintiffs A and B drinking, laughing, and sitting on the lap of the executive in question. The associate immediately sends a document preservation notice to plaintiffs’ counsel admonishing them to “preserve all the rules or substantive law pertaining to the preservation and/or spoliation of evidence, the lawyer also may advise that a client remove information relevant to the foreseeable proceeding from social media pages as long as the social media information or data is preserved.” Fla. Bar, Advisory Op. 14-1 (2015).
documents, materials, photographs, and data, including content of any social media sites relating to the plaintiffs’ employment with the company, including all company events.” The associate then follows up with a document request. Did the associate act properly and within the parameters of the Professional Rules of Conduct?

Overall, this class is a deep dive into the ethical implications and rules that govern an attorney’s use of social media for investigative and discovery purposes. Because students are often tasked with assisting in discovery and investigation at their externship placements, they find these topics on point and applicable.

G. Teaching Plan for Ethical and Professional Implications of Social Media Use

In every externship seminar I teach, including the semester-long social media-focused one, students learn about the ethical and professional implications of social media use. I use the ABA Standards and Foundations for Practice Survey to demonstrate the necessity for law students and lawyers to develop professional competency in social media use.281 Typically, any class on this topic begins with a review of the applicable Rules of Professional Conduct, specifically Rules 1.6, 282 4.2, 283 4.3, 284 5.3, 285 5.5, 286 7.1, 287 7.2, 288 and 7.3 289. I use hypotheticals that allow students to apply the rules and discern what social media behavior is permissible under the same. Examples of hypotheticals include:

- As a law student, you monitor LinkedIn regularly. A person you exchanged business cards with at a charity event sends you a message describing a set of facts. The message does not mention any names and asks whether you think there is a viable claim. You respond, “Yes.” Are there any ethical concerns here?
- Second-year law student Pam B. is externing at a midsize criminal defense firm in Denver. Given her interest in criminal law, she maintains an interactive blog called This Week in Colorado’s

---

282. Model Rules of Prof’l Conduct r. 1.6 (Am. Bar Ass’n 2018) (“Confidentiality of Information”).
283. Id. at r. 4.2 (“Communication with Person Represented by Counsel”).
284. Id. at r. 4.3 (“Dealing with Unrepresented Person”).
285. Id. at r. 5.3 (“Responsibilities Regarding Nonlawyer Assistance”).
286. Id. at r. 5.5 (“Unauthorized Practice of Law; Multijurisdictional Practice of Law”).
287. Id. at r. 7.1 (“Communication Concerning a Lawyer’s Services”).
288. Id. at r. 7.2 (“Communications Concerning a Lawyer’s Services; Specific Rules”).
289. Id. at r. 7.3 (“Solicitation of Clients”).
Criminal Defense, which is accessible through her LinkedIn page. The blog discusses a variety of legal issues and cases handled by the firm, which she comments on, and brags about favorable rulings and verdicts. The blog further describes, in detail, the proceedings of public criminal prosecutions spiced with her ideological commentary as an aspiring criminal defense lawyer. For example, in one blog post, she excoriated the prosecutor’s decision to charge a homeowner for shooting an unarmed burglar. Some of the cases on which she comments involve the firm’s current clients and former clients. Does the extern’s blog raise any concerns?

- Change the facts and assume Pam maintains a personal blog where she discusses her views on current legal issues, politics, and law school. She invites comments from other people. One post sparked a debate on cannabis law, in which Pam replied by calling the commenters “idiots” and “racists,” among other things. Does her personal blog raise any concerns?

- Blair, a recent law school graduate, decides to hang up her own shingle. In preparation, she prints stationary and cards, and she sets up a webpage and several social media pages. In order to avoid confusion, she places “J.D.” after her name. She begins to hand out her cards with her info at networking receptions and other events in hopes of getting a running start once she is sworn in. Because her Facebook page states that she is a J.D., people begin to ask her legal questions on her Facebook page. Thinking that the designation of J.D. clearly communicates the fact that she is not yet licensed, she begins to provide answers to the inquiries, in hopes of building a client base post-licensure. Any ethical concerns here?

- You prepare press releases on your recent successes as a lawyer. You send tweets to potential clients to alert them about the press releases. What ethical issues, if any, do you see by this practice?

I generally divide the class into small groups to discuss the hypotheticals. Following a small group discussion, we reconvene as a large group. We focus on instances where lawyers have destroyed their professional reputation or have been disciplined by their state bar for unprofessional and unethical social media use. Students, considering the Rules of Professional Conduct, engage in a large class discussion of the following examples:
Aaron Schlossberg, the New York-based lawyer whose racially-charged rant against Spanish-speaking employees went viral; 290

Haley Geftman-Gold’s (in-house lawyer for CBS) Facebook post following the mass shooting in Las Vegas; 291

Andrew Leonie’s (Associate Deputy General attorney in Texas) Facebook post criticizing the #MeToo movement; 292

An Austin-based attorney’s resignation after tweeting that he would “be ok if #BetsyDeVos [sic] was sexually assaulted”; 293

An Illinois attorney suspended after blogging about her current case; 294

A Florida attorney who received public reprimand for a blog post that contained derogatory comments concerning a judge; 295

Two attorneys who used Instagram to post a picture of a courtroom with the hashtag “#killinnazis”; 296 and

An attorney disciplined for posting inflammatory comments that breached confidentiality on internet websites in response to clients who posted complaints. 297

To further highlight the implications of improper social media use, we discuss instances where businesses harmed their brand by using social media. These include: (1) an ill-timed tweet by American Rifleman, the official NRA journal, following a Colorado mass shooting at a movie theater, 298 (2) a

291. Weiss, supra note 115.

292. Astor, supra note 115.

295. See In re McCool, 172 So. 3d 1058, 1087 n. 5 (La. 2015) (explaining the facts behind the public reprimand ordered in Florida Bar v. Conway, No. SC08–326, 2008 WL 4748577, at *1 (Fla. Oct. 29, 2008)).

All of these examples spark thoughtful discussion. In fact, students are often astonished that lawyers and businesses have engaged in such improper social media use. The lesson I try to impart is that modern society operates in an immediate, instant gratification mode. In other words, people and businesses use social media to immediately respond to trending topics, current events, and social issues, which can, of course, include oversharing and personal venting. Unfortunately, it is only with 20/20 hindsight that they realize such behavior does not comport with professionalism and ethical standards.

I dedicate the last part of class to more small group work. I assign students to read the character and fitness qualifications for admission to the Colorado bar prior to class, which are set forth in Colorado Rules of Civil Procedure Rule Rule 208.301 Rule 208.1(6) specifically outlines relevant conduct that shall be treated as cause for scrutiny of whether the applicant possesses the necessary character and fitness.302 Once in class, students divide into small groups to dissect these qualifications as they pertain to social media use. The questions posed to the small groups are:

- Should law students expect bar admission committees to review social media content when evaluating their character?
- Considering Colorado’s Character & Fitness Standards, would investigation of an applicant’s social media content have a rational connection to the applicant’s fitness or capacity to practice law?
- What should the criteria be to determine whether an applicant’s social media activity deems him or her unfit to practice law?
- Does your review and consideration of Colorado’s Character & Fitness Standards impact your online behavior?
- Should law schools implement a social media use policy for their students? If so, what would that policy look like?

After the students engage in small groups, the class reconvenes to debrief. Students generally agree that they should expect bar admission

302. Id. at 208.1(6).
303. “The College of Law at West Virginia University [social media] policy ‘encourage[s] students to use [social media] as a professional tool, [and] educate[s] them about etiquette, ethics, and best practices. [The university] seek[s] to model how social networking can contribute to a professional public presence by using it to communicate with the world.’” See, e.g. Skinner, supra note 268, at 283 (alterations in original) (footnotes omitted).
committees to review social media content. Often times, however, students disagree on whether certain online activity has a rational connection to their fitness to practice law. They argue that it should not be a blanket approach. Rather, bar admission committees should consider the following: (1) What is the timeframe of the questionable online activity? (Did the conduct happen five years ago? Ten years ago?); (2) Did the student engage in the social media activity, or was she implicated by another user that tagged her?; (3) Is there a pattern of improper social media engagement, or is this a one-time bad decision?; (4) Did the student undertake any steps to mitigate the damage?; and (5) Has the student demonstrated remorse for such conduct?

This class always sparks thoughtful, reflective, and lively conversations. Students walk away with the tools to engage in social media in a professional capacity, as well as with an appreciation for the ethical pitfalls of improper use.

CONCLUSION

Developing social media skills is fundamental to an attorney’s success in the legal profession. As a result, law students need to develop competency with, and become effective users of, this technology. Not only do they have to understand how to effectively and professionally utilize social media, they should appreciate the perils of improper use. The bottom line is that it is imperative to take control; even if you do not, “you still have an online presence. The problem is that you will be at the mercy of what other people say about you.”

Given that the ABA now recognizes technology as part of a lawyer’s required competency, law schools can better prepare its students to enter the practice by teaching basic and fundamental social media skills, including how to engage in a professional manner on these platforms and the legal and ethical risks of using this technology. Experiential legal education courses, particularly externship seminars, would be an appropriate venue to do so. These seminars help “bridge the gap” between law school and the practice of law. Externship seminars provide ample opportunity for self-reflection, development of one’s professional identity, and advancement and refinement of skills. Law professors can create semester-long social media seminars or, to start, can simply integrate the topic into existing seminars. Regardless of the format one chooses, it is vital to educate students on the importance of e-

305. MODEL RULES OF PROF’L CONDUCT r. 1.1 cmt. 8 (AM. BAR ASS’N 2018).
306. Buiteweg, supra note 261.
professionalism. Law schools must prepare students for the realities of living and working in a technology-driven age. However, teaching e-professionalism and social media skills to law students within experiential education is just one step in the right direction.
